Wecryl 420 Rolled Surfacing

Wecryl 420 Rolled Surfacing

Asphalt surfacing on squares, roads, verges or parking bays is often colour-enhanced. Factors such as design, anti-skid properties and abrasion resistance play an important part in this context. Wecryl 420 Rolled Surfacing is used as a pigmented wearing layer and applied to pre-treated asphalt substrates. The product features high abrasion resistance and excellent non-skid properties and was developed specifically for heavy-duty applications.
